

Please reject NAB's petition 04-160 which unfairly seeks to limit my right of choice to pay for and receive Instant Traffic and Weather for a variety of cities on XM radio. This has proven a valuable service to me as I travel extensively for work and now have an easy way to gain traffic and weather information for the cities to which I travel without searching for a local channel and waiting while they play extensive commercials. I believe consumers should have the right to purchase such a service or chose to rely on local radio channels for such information. Isn't this what drives a free market, capitalistic society? Thank you for your attention to this matter and consideration of my opinions. Respectfully submitted.
